

Frustrated by technology?

Try the seasoned professionals at Impact

Our strengths

- Experience - Our staff have hands-on track records of developing, managing and implementing large scale financial and management information systems for international clients. It is this practical experience that we believe gives us the tools to guide your project and provides you with a solid return on your software investment.
- Flexibility – utilising flexible development methods such as prototyping and agile development methodologies as well as the more formal functional specification, ensures our service fits your way of working.
- Project delivery – a solid track record of delivering complex solutions on time and to budget. Achieved through investing time up front to understand our clients' needs and delivering tangible results to their business.

Software innovators

A team of highly creative software engineers who add real value to your business through consultation and software development services. Impact staff prides themselves on finding innovative solutions where there may be budgetary, operational or technical constraints. Our teams depth of knowledge and experience allows us to assess the wider picture, not just providing a solution but ensuring it will fully integrate with your existing business systems.

It's amazing how much difference a little bit of seasoning makes...

Our approach

Through thorough consultation we design a best fit solution that takes into consideration not only the technological requirements, but also the usability needs, design look and feel and the ultimate impact on your business as a whole.

We don't believe in re-creating the wheel if it's not necessary. If your existing systems function, but are restricting your business growth or are cumbersome to use we can work with you to refine and enhance these systems, thus keeping your development costs to a minimum.

If a complete green field development is what's required we're no stranger to this environment either and our team are sure to add value to your project through a creative approach to problem solving and a wealth of knowledge in a wide variety of complex systems development.

A flavour of what we can do...
